TECHNICAL REPORTS LIST

The Computer Science Department at Columbia University is pleased to announce the enclosed list of technical reports and abstracts for 1975-1987.

If you wish to order any of these reports, please complete the form below, fold so that the return address is properly positioned, and affix postage.

[CUCS-1-75] Inferring lisp programs from examples.
David Elliot Shaw, William R. Swartout, and C. Cordell Green.

[CUCS-10-80] Learning meta-rule control of production systems from execution traces.
Malcolm C. Harrison and Salvatore J. Stolfo.

[CUCS-100-84] An o(ev log v) algorithm for finding a maximal weighted matching in general graphs.
Zvi Galil, Silvio Micali, and Harold Gabow.

[CUCS-101-84] Ill-formed text and conceptual processing.
Michael Lebowitz.

[CUCS-102-84] Experience with a production compiler automatically generated from an attribute grammar.
Rodney Farrow.

[CUCS-103-84] Simd and msimd variants of the non-von supercomputer.
David Elliot Shaw.

[CUCS-104-84] Ppl/m: The system level language for programming the @i(dado) machine.
Salvatore J. Stolfo, Gerald Q. Maguire Jr., and Mark D. Lerner.

[CUCS-105-84] @g(b)-trees, @g(g)-systems, and a theorem on f-heaps.
Zvi Galil and Thomas Spencer.

[CUCS-106-84] Linear problems (with extended range) have linear optimal algorithms.
Edward W. Packel.

[CUCS-107-84] ——psl: A parallel lisp for the @i(dado) machine.
Michael K. Van Biema, Mark D. Lerner, and Salvatore J. Stolfo Gerald Maguire.

[CUCS-108-84] An analysis of abstraction in problem solving.
Richard E. Korf.

[CUCS-109-84] Simultaneous firing of production rules on tree structured machines.
Toru Ishida and Salvatore J. Stolfo.

[CUCS-11-81] An information-theoretic scale for cultural rule systems.
Jonathan L. Gross.

[CUCS-110-84] Interest and predictability: Deciding what to learn, when to learn.
Michael Lebowitz.

[CUCS-111-84] Concept learning in a rich input domain: Generalization-based memory.
Michael Lebowitz.

[CUCS-112-84] Lps algorithms: A detailed examination.
Andy Lowry, Stephen Taylor, and Salvatore J. Stolfo.

[CUCS-113-84] Lps algorithms: A critical analysis.
Andy Lowry, Stephen Taylor, and Salvatore J. Stolfo.

[CUCS-114-84] Taking the initiative in problem-solving discourse.
Kevin Matthews and Kathleen McKeown.

[CUCS-115-85] Determining the level of expertise of a user of a question answering system.
Cecile Paris.

[CUCS-116-84] Five parallel algorithms for production system execution on the dado machine.
Salvatore J. Stolfo.

[CUCS-117(A)-84] Analyzing prolog programs.
Stephen Taylor, Gerald Maguire Jr., and Salvatore J. Stolfo Andy Lowry.

[CUCS-117(B)-84] The connected component algorithm on the non-von supercomputer.
Hussein A. H. Ibrahim.

[CUCS-118-84] Performance estimates for the dado machine: A comparison of @i(treat) and @i(rete).
Daniel P. Miranker.

[CUCS-119-84] Tree machines: Architecture and algorithms – a survey paper.
Hussein A. H. Ibrahim.

[CUCS-12-81] @i(abstract) understanding: The relation between language and memory.
Michael Lebowitz.

[CUCS-120-84] Time-constrained communication in multiple access networks.
James Francis Kurose.

[CUCS-121-84] Using memory in text understanding.
Michael Lebowitz.

[CUCS-122-84] Dado: A parallel processor for expert systems.
Salvatore J. Stolfo and Daniel P. Miranker.

[CUCS-123-84]

[CUCS-124-84] Understanding hierarchically structured objects.
Kenneth Wasserman.

[CUCS-125-84]

[CUCS-126-84] Optimal parallel algorithms.
Zvi Galil.

[CUCS-127-84] The connected component algorithm on the non-von supercomputer.
Hussein A.H. Ibrahim.

[CUCS-128-84] Is cad/cam ready for ai?
Salvatore J. Stolfo.

[CUCS-129-84] Construction through decomposition: A linear time algorithm for the n-queens problem.
Bruce Abramson and Mordechai M. Yung.

[CUCS-13-81] Memory-based parsing.
Michael Lebowitz.

[CUCS-130-84] A note on implementing ops5 production systems on dado.
Salvatore J. Stolfo.

[CUCS-131-84] What is the complexity of the fredholm problem of the second kind?
Arthur G. Werschulz.

[CUCS-132-84] What is the complexity of elliptic systems?
Arthur G. Werschulz.

[CUCS-133-84] An eight-processor chip for a massively parallel machine.
David Elliot Shaw and Theodore M. Sabety.

[CUCS-134-84] A survey of tree-walk evaluation strategies for attribute grammars.
Daniel Yellin.

[CUCS-135-84] The automatic inversion of attribute grammars.
Daniel Yellin and Eva-Maria M. Mueckstein.

[CUCS-136-84] A secure and useful 'keyless cryptosystem'.
Mordechai M. Yung.

[CUCS-137-84] Cryptoprotocols: Subscription to a public key, the secret blocking and the multi-player mental poker game (extended abstract).
Mordechai Yung.

[CUCS-138-84]

[CUCS-139(A)-84] Image understanding algorithms on fine-grained tree-structured simd machines.
Hussein A. H. Ibrahim.

[CUCS-139(B)-84] A statistical mechanics of some interconnection networks.
Eugene Pinsky and Yechiam Yemini.

[CUCS-14-81] Representing complex events simply.
Michael Lebowitz.

[CUCS-140-84] Development tools for communication protocols: An overview.
Nihal Nounou and Yechiam Yemini.

[CUCS-141-84] Algebraic specification-based performance analysis of communication protocols.
Nihal Nounou and Yechiam Yemini.

[CUCS-142-84] Can we approximate zeros of functions with non-zero topological degree?
T. Boult and K. Sikorski.

[CUCS-143-80] Can any stationary iteration using linear information be globally convergent?
G. W. Wasilkowski.

[CUCS-144-84]

[CUCS-145-79] Any iteration for polynomial equations using linear information has infinite complexity.
G. W. Wasilkowski.

[CUCS-146-85] A lisp compiler for the dado parallel computer.
Mark D. Lerner, Michael van Biema, and Gerald Q. Maguire Jr.

[CUCS-147-84] Execution of ops5 production systems on a massively parallel machine.
Bruce K. Hillyer and David Elliot Shaw.

[CUCS-148-84] Some nonlinear problems are as easy as the approximation problem.
G. W. Wasilkowski.

[CUCS-149-84] When is nonadaptive information as powerful as adaptive information?
J. F. Traub, G. W. Wasilkowski, and H. Wozniakowski.

[CUCS-15-81] Double-edge-triggered flip-flops.
Stephen H. Unger.

[CUCS-150-85] Taking the initiative for system goals in cooperative dialogue.
Kevin Matthews.

[CUCS-151-85] Initiatory and reactive system roles in human computer discourse.
Kevin Matthews.

[CUCS-152-84] Approximation of linear operators on a wiener space.
D. Lee.

[CUCS-153-85] A cure for pathological behavior in games that use minimax.
Bruce Abramson.

[CUCS-154-85] Towards the parallel execution of rules in production system programs.
Toru Ishida and Salvatore J. Stolfo.

[CUCS-155-84] A note on bivariate box splines on a k-direction mesh.
D. Lee.

[CUCS-156-85] Macro-operators: A weak method for learning.
Richard E. Korf.

[CUCS-157-84] An overview of the dado parallel computer.
Mark D. Lerner, Gerald Q. Maguire Jr., and etc.

[CUCS-158-85] Attribute grammars and single-assignment languages.
Rodney Farrow.

[CUCS-159-85] Surface orientation and segmentation from perspective views of parallel-line textures.
Mark L. Moerdler and John R. Kender.

[CUCS-16-81] Specialized hardware for production systems.
Salvatore J. Stolfo and David Elliot Shaw.

[CUCS-160-85] Development tools for communication protocols.
Nihal Nounou and Yechiam Yemini.

[CUCS-161-85] Complexity of approximately solved problems.
J. F. Traub.

[CUCS-162-85] On the complexity of composition and generalized composition of power series.
R. P. Brent and J. F. Traub.

[CUCS-163-85] A generic framework for expert data analysis systems.
Luanne Burns and Alexander Pasik.

[CUCS-164-85] Explanation and acquisition in expert systems using support knowledge.
Alexander Pasik, Jens Christensen, Agata Stancato-Pasik Douglas Gordin, and Salvatore Stolfo.

[CUCS-165-85] A comparison of storage optimizations in automatically-generated attribute evaluators.
Rodney Farrow and Daniel Yellin.

[CUCS-166(A)-85] Are maintenance expert systems practical now?
Peter Waldes, Janet Lustgarten, and Salvatore J. Stolfo.

[CUCS-166(B)-85] Compiling path expressions into vlsi circuits.
T. S. Anantharaman, E. M. Clarke, M. J. Foster, and B. Mishra.

[CUCS-167-85] Description strategies for naive and expert users.
Cecile L. Paris.

[CUCS-168-84] Menu interfaces to expert systems: Overview and evaluation.
Galina Datskovky.

[CUCS-169-85] Natural language interfaces to expert systems.
Galina Datskovky.

[CUCS-17-81] A highly parallel vlsi-based subsystem of the non-von database machine (extended abstract).
David Elliot Shaw, Hussein Ibrahim, Gio Widerhold, and Jim Andrews.

[CUCS-170-85] The information-centered approach to optimal algorithms applied to the 2-1/2 d sketch.
John R. Kender, David Lee, and Terrance Boult.

[CUCS-171-85] Researcher: An experimental intelligent information system.
Michael Lebowitz.

[CUCS-172-85] Tailoring explanations for the user.
Kathleen R. McKeown, Myron Wish, and Kevin Matthews.

[CUCS-173-85] The need for text generation.
Kathleen R. McKeown.

[CUCS-174-85] A simple preprocessing scheme to extract and balance implicit parallelism in the concurrent match of production rules.
Salvatore J. Stolfo, Daniel Miranker, and Russell C. Mills.

[CUCS-175-85] More rules may mean faster parallel execution.
Salvatore J. Stolfo, Daniel Miranker, and Russell C. Mills.

[CUCS-176-85] Optimal algorithm for linear problems with gaussian measures.
G. W. Wasilkowski.

[CUCS-177-85] Unifying representation and generalization: Understanding hierarchically structured objects – ph.d. dissertation.
Kenneth Hal Wasserman.

[CUCS-178-84] Finite element methods are not always optimal.
Arthur G. Wershulz.

[CUCS-179-85] A private interactive test of a boolean predicate and minimum-kn owledge public-key cryptosystems-extended abstract.
Zvi Galil, Stuart Haber, and Moti Yung.

[CUCS-18-81] Non-von: A parallel machine architecture for knowledge-based information processing.
David Elliot Shaw.

[CUCS-180-85] Distributed algorithms in synchronous broadcasting networks.
Zvi Galil, Gad M. Landau, and Moti Yung.

[CUCS-181-85] A survey of information-based complexity.
H. Wozniakowski.

[CUCS-182-85] Contributions to information-based complexity, image understanding and logic circuit design - ph.d. dissertation.

David Lee.

[CUCS-183-85] Optimal algorithms for image understanding: Current status and future plans.

D. Lee.

[CUCS-184-85] Integrating Sensory Data for Object Recognition Tasks.

Peter K. Allen and Ruzena Bajcsy.

[CUCS-185-85] A methodology for specification-based performance analysis of communication protocols.

Nihal Nounou and Yechiam Yemini.

[CUCS-186-85] Analyst: An automated analyzer of protocol performance.

Nihal Nounou and Yechiam Yemini.

[CUCS-187-85] An optimal complexity algorithm for computing topological degree in two dimensions.

T. Boult and K. Sikorski.

[CUCS-188-85] Complexity of computing topological degree of lipschitz functions in n dimensions.

T. Boult and K. Sikorski.

[CUCS-189-85] Visual surface interpolation: A comparison of two methods.

Terrance E. Boult.

[CUCS-19-81] On the long-term implications of database machine research.

David Elliot Shaw.

[CUCS-190-85] Generalizing logic circuit designs by analyzing proofs of correctness.

Thomas Ellman.

[CUCS-191-85] Symmetric public-key encryption.

Zvi Galil, Stuart Haber, and Moti Yung.

[CUCS-192-85] Finding a maximum-genus graph imbedding.

Merrick L. Furst, Jonathan L. Gross, and Lyle A. McGeoch.

[CUCS-193-85] Genus distribution for two classes of graphs.

Merrick L. Furst, Jonathan L. Gross, and Richard Statman.

[CUCS-194-85] Hierarchy for imbedding-distribution invariants of a graph.

Jonathan L. Gross and Merrick Furst.

[CUCS-195-85] A knowledge-based expert systems primer and catalog.

Bruce K. Hillyer.

[CUCS-196-85] Specification if interpreters and debuggers using an extension of attribute grammars.

Gail E. Kaiser.

[CUCS-197-85] Depth-first iterative-deepening: An optimal admissible tree search.

Richard E. Korf.

[CUCS-198-85] Implementation of the gmr algorithm for large symmetric eigenproblems.

Jacek Kuczynski.

[CUCS-199-85] On the optimal solution of large eigenpair problems.
Jacek Kuczynski.

[CUCS-2-77] Structure and abstraction in a system for conceptual methods.
David Elliot Shaw.

[CUCS-20-81] Selfish optimization in computer networks.
Yechiam Yemini.

[CUCS-200-85] The use of memory in text processing.
Michael Lebowitz.

[CUCS-201-85] Integrated learning: Controlling explanation.
Michael Lebowitz.

[CUCS-202-85] Story telling as planning and learning.
Michael Lebowitz.

[CUCS-203-84] Lps algorithms.
Andy Lowry, Stephen Taylor, and Salvatore J. Stolfo.

[CUCS-204-85] Discourse strategies for generating natural-language text.
Kathleen R. McKeown.

[CUCS-205-85] An automated performance analysis of a two phase locking protocol.
Nihal Nounou and Yechiam Yemini.

[CUCS-206-85] A methodology for specification-based performance analysis of communication protocols.
Nihal Nounou and Yechiam Yemini.

[CUCS-207-85] Analyst: An automated analyzer of protocol performance.
Nihal Nounou.

[CUCS-208-85] Guide to the unification process and its implementation. progress report on extending the grammar.
Cecile L. Paris and TjoeLiong Kwee.

[CUCS-21-81] Parallel knowledge-based information retrieval on the non-von machine.
David Elliot Shaw.

[CUCS-210-85] Equivalent descriptions of generalized cylinders.
K. S. Roberts.

[CUCS-211-83] Allocation and manipulation of records in the non-von supercomputer.
David Elliot Shaw and Bruce K. Hillyer.

[CUCS-212-85] Dado: A parallel computer for artificial intelligence.
Salvatore J. Stolfo.

[CUCS-213-84] The dado production system machine.
Salvatore J. Stolfo and Daniel P. Miranker.

[CUCS-214-85] A simple scheme for a fault tolerant dado machine.
Salvatore J. Stolfo.

[CUCS-215-85] Clocking schemes for high speed digital systems.

Stephen H. Unger.

[CUCS-216-85] Compleity of differential and integral equations.

Arthur G. Werschulz.

[CUCS-217-85]

[CUCS-218-85] Analyzing user plans to produce informative responses by a programmer's consultant.

Ursula Wolz.

[CUCS-219-85] Generating admissible heuristics by criticizing solutions to relaxed models.

Othar Hansson, Andrew E. Mayer, and Mordechai M. Yung.

[CUCS-22-81] The non-von database machine: An overview.

David Elliot Shaw, Salvatore J. Stolfo, Hussein Ibrahim, Bruce Hillyer, Gio Wiederhold, and J. A. Andrews.

[CUCS-220-85] Object recognition using vision and touch.

Peter Kirby Allen.

[CUCS-221-85] On the application of massively parallel simd tree machines to certain intermediate-level vision tasks.

Hussein A. H. Ibrahim, John R. Kender, and David Elliot Shaw.

[CUCS-222-86] Simd tree algorithms for image correlation.

Hussein A. H. Ibrahim, John R. Kender, and David Elliot Shaw.

[CUCS-223(A)-86] Robust estimation and filtering in the presence of unknown but bounded noise.

Robert Tempo.

[CUCS-223-86] Disk response time measurements.

Thomas D. Johnson, Jonathan M. Smith, and Eric S. Wilson.

[CUCS-224-86] Change management support for large software systems.

Gail Kaiser, Dewayne E. Perry, and Robert W. Schwanke.

[CUCS-225-86] Generation of distributed programming environments.

Gail E. Kaiser, Simon M. Kaplan, and Josephine Micallef.

[CUCS-226-86] Meld/features: An object-oriented approach to reusable software.

Gail E. Kaiser.

[CUCS-227-86] Smile/marvel: Two approaches to knowledge-based programming environments.

Gail E. Kaiser and Peter H. Feiler.

[CUCS-228-86] The do-loop considered harmful in production system programming.

Michael van Biema, Daniel P. Miranker, and Salvatore J. Stolfo.

[CUCS-229-86] Physical object representation and generalization: A survey of programs for semantic-based natural language processing.

Kenneth Wasserman.

[CUCS-23-82] The text system for natural language generation: An overview.

Kathleen R. McKeown.

[CUCS-230-86] Thesis proposal: The expected-outcome model of two-player games.
Bruce Abramson.

[CUCS-231-86] Director – an interpreter for rule-based programs.
Galina Datskovsky Moerdler and J. Robert Ensor.

[CUCS-232-86] The ops family of production system languages.
Alexander Pasik.

[CUCS-233-86] Avoiding latch formation in regular expression recognizers.
M. J. Foster.

[CUCS-234-86] Control strategies for two player games.
Bruce Abramson.

[CUCS-235-86] Language generation: Applications, issues, and approaches.
Kathleen R. McKeown.

[CUCS-236-86] Replication and nested transactions in the eden distributed system.
Calton Pu.

[CUCS-237-86] Probabilistic setting of information-based complexity.
H. Wozniakowski.

[CUCS-238-86] Complexity of integration in different settings.
H. Wozniakowski.

[CUCS-239-86] Sensing and describing 3-d structure.
Peter K. Allen.

[CUCS-24-82] Dado: A tree-structured machine architecture for production systems.
Salvatore J. Stolfo and David Elliot Shaw.

[CUCS-240-86] Integrating vision and touch for object recognition tasks.
Peter K. Allen.

[CUCS-241-86] Approaches to distributed unix systems.
Jonathan Smith.

[CUCS-242-86] Physical stereo for combined specular and diffuse reflection.
Lawrence B. Wolff.

[CUCS-243-86] Superdatabases for composition of heterogeneous databases.
Calton Pu.

[CUCS-244-86] Smoothness assumptions in human and machine vision, and their implications for optimal surface interpolation.
Terrance Boult.

[CUCS-245-86] Information-based complexity in nonlinear equations and computer vision.
Terrance E. Boult.

[CUCS-246-86] Methods for performance evaluation of parallel computer systems.
Yoram Eisenstadter.

[CUCS-247-86] Translating between programming languages using a canonical representation and attribute grammar inversion- extended abstract.

Rodney Farrow and Daniel Yellin.

[CUCS-248-85] Contributions to information-based complexity, image understanding, and logic circuit design.

David Lee.

[CUCS-249-86] A methodology for specification-based performance analysis of protocols - ph.d. dissertation.

Nihal Nounou.

[CUCS-25-82] Towards distributed sensors networks: An extended abstract.

Y. Yemini and A. Lazar.

[CUCS-250-86] Discourse strategies for descriptions of complex physical objects.

Cecile L. Paris and Kathleen R. McKeown.

[CUCS-252-86] Robust estimation and filtering in the presence of unknown but bounded noise.

Roberto Tempo.

[CUCS-253-86] A polynomial jump operator.

Michael Townsend.

[CUCS-254-86] Clocking schemes for high-speed digital systems.

Stephen Unger.

[CUCS-255-86] Information of varying cardinality.

Greg Wasilkowski.

[CUCS-256-86] What is the complexity of ill-posed problems?

Arthur G. Werschulz.

[CUCS-257-86] Average complexity for linear operators over bounded domains.

H. Wozniakowski.

[CUCS-258-86] An information-based approach to ill-posed problems.

Arthur G. Werschulz.

[CUCS-259-87] The synthesis kernel.

Calton Pu, Henry Massalin, and John Ioannidis.

[CUCS-26-82] Towards the unification of the functional and performance analysis of protocols or, is the alternating-bit protocol really correct?

Y. Yemini and J. F. Kurose.

[CUCS-260-87] Monitoring comceptual decisions to generate coherent text.

Michal Blumenstyck and Kathleen R. McKeown.

[CUCS-261-86] On the average complexity of multivariate problems.

Anargyros Papageorgiou and Grzegorz Wasilkowski.

[CUCS-262-87] A survey of automated consulting in interactive programming environments.

Ursula Wolz.

[CUCS-263-87] Finding a maximum-genus graph imbedding.

Merrick L. Furst, Jonathan L. Gross, and Lyle A. McGeoch.

[CUCS-264-87] The theory of minimum-knowledge protocols.
Stuart Haber.

[CUCS-265-87] Explanation-based methods for simplifying intractable theories: Thesis proposal.
Thomas Ellman.

[CUCS-266-87] Explanation-based learning: A survey of programs and perspectives.
Thomas Ellman.

[CUCS-267-87] A new kernel for the dado2 parallel computer.
Russell C. Mills, Zdenek Radouch, and Jr. Gerald Q. Maguire.

[CUCS-268-87] Process migration: Effects on scientific computation.
Gerald Q. Maguire, Jr., and Jonathan A. Smith.

[CUCS-269-87] Rb: Programmer specification of redundancy.
Jonathan M. Smith and Jr. Gerald Q. Maguire.

[CUCS-27-82] Complexity of linear programming.
J. F. Traub and H. Wozniakowski.

[CUCS-270-87] Choices in the design of a language pre-processor for specifying redundancy.
Jonathan M. Smith and Jr. Gerald Q. Maguire.

[CUCS-271-87] Parallel vision algorithms: The annual technical report.
Hussein Ibrahim, John Kender, and Lisa Brown.

[CUCS-272-87] A formal generalization of stereo vision.
Lawrence B. Wolff.

[CUCS-273-87] Shape from polarization images.
Lawrence B. Wolff.

[CUCS-274-87] On the power of parity.
Jin yi Cai and Lane A. Hemachandra.

[CUCS-275-87] Notes on the implementation of a remote fork mechanism.
John Ioannidis and Jonathan M. Smith.

[CUCS-276-87] Dial: Diagrammatic animation language tutorial and reference manual.
Steven Feiner.

[CUCS-277-87] A framework for automated picture generation.
Steven Feiner.

[CUCS-278-87] Reliable network communications.
Gail E. Kaiser, Yael J. Cycowicz, Wenwey Hseush, and Josephine Micallef.

[CUCS-279-87] Software development environments for very large software systems.
Gail E. Kaiser, Yoelle S. Maarek, Dewayne E. Perry, and Robert W. Schwanke.

[CUCS-28-82] A statistical mechanics of distributed resource sharing mechanisms.
Yechiam Yemini.

[CUCS-280-87] Mercury: Distributed incremental attribute grammar evaluation.
Gail E. Kaiser, Josephine Micallef, and Simon M. Kaplan.

[CUCS-281-87] Meld: A multi-paradigm language with objects, dataflow and modules.
Gail E. Kaiser and David Garlan.

[CUCS-282-87] Use of artificial intelligence techniques in software engineering.
Gail E. Kaiser, Naser S. Barghouti, Ursula Wolz, and Yoelle S. Maarek.

[CUCS-283-87] Parallel computers, number theory problems, and experimental results.
Mark D. Lerner.

[CUCS-284-87] An inconsistency management system: Master's thesis.
Harris M. Morgenstern.

[CUCS-285-87] Encapsulation, reusability and extensibility in object-oriented programming languages.
Josephine Micallef.

[CUCS-286-87] Constructing multi-resolution image representations in real time.
Ajit Singh and Peter Allen.

[CUCS-287-87] Measurement of visual motion.
Ajit Singh.

[CUCS-288-87] Deriving shape from shadows: A hilbert space setting.
Michael Hatzitheodorou.

[CUCS-289-87] Links between situation and language use; towards a more coherent interaction.
Michael Elhadad.

[CUCS-29-82] The non-von super computer.
David Elliot Shaw.

[CUCS-290-87] Updating distance maps when objects move.
Terrence E. Boult.

[CUCS-291-87] Recovering superquadrics from 3-d information.
Terrence E. Boult and Ari Gross.

[CUCS-292-87] Analysis of two new stereo algorithms.
Terrence E. Boult and L. H. Chen.

[CUCS-293-87] Energy-based surface segmentation.
Terrence E. Boult and L. H. Chen.

[CUCS-294-87] An experimental system for the integration of information from stereo and multiple shape-from-texture algorithms.
Terrence E. Boult and Mark L. Moerdler.

[CUCS-295-87] Genus distributions for bouquets of circles.
Jonathan L. Gross, David P. Robbins, and Thomas W. Tucker.

[CUCS-296-87] Genus distributions for two classes of graphs.
Merrick L. Furst, Jonathan L. Gross, and Richard Statman.

[CUCS-297-87] Reset sequences for finite automata with application to design of parts orienters.
David Eppstein.

[CUCS-209-85] Towards more graceful interaction: A survey of question-answering programs.
Cecile L. Paris.

[CUCS-298-87] A syntactic omni-font character recognition system.
George Wolberg.

[CUCS-299-87] Data structures and algorithms for approximate string matching.
Zvi Galil and Raffaele Giancarlo.

[CUCS-3-79] The strength of nonstationary iteration.
G. W. Wasilkowski.

[CUCS-30-82] On the optimal solution of large linear systems.
J. F. Traub and H. Wozniakowski.

[CUCS-300-87] Speeding up dynamic programming with applications to molecular biology.
Zvi Galil and Raffaele Giancarlo.

[CUCS-301-87] On nontrivial separators for k-page graphs and simulations by nondeterministic one-tape turing machines.
Zvi Galil, Ravi Kannan, and Endre Szemeredi.

[CUCS-302-87] An o(n2(m+nlog n)log n) min-cost flow algorithm.
Zvi Galil and Eva Tardos.

[CUCS-303-87] On 3-pushdown graphs with large separators.
Zvi Galil, Ravi Kannan, and Endre Szemeredi.

[CUCS-304-87] Two lower bounds in asynchronous distributed computation.
Pavol Duris and Zvi Galil.

[CUCS-305-87] A survey of interfaces to data base and expert systems.
Galina Datskovsky Moerdler.

[CUCS-306-87] Building a natural language interface to expert systems.
Galina Datskovsky Moerdler.

[CUCS-307-87] A collection of 4 transcripts of long conversations through computers - including the experiments protocols.
Michael Elhadad.

[CUCS-308-87] Average case setting for linear problems.
Anargyros Papageorgiou.

[CUCS-309-87] The use of explicit user models in text generation: Tailoring to a user's level of expertise.
Cecile Laurence Paris.

[CUCS-31-82] Average case optimality for linear problems.
J. F. Traub, G. Wasilkowski, and H. Wozniakowski.

[CUCS-310-87] Mixed distance measures for optimizing concatenative vocabularies for speach synthesis: A thesis proposal.
Nathaniel Polish.

[CUCS-311-87] A status report on the student advisor system.
Jong G. Lim.

[CUCS-312-87] A survey of parallel programming constructs.
Michael van Biema.

[CUCS-313-87] Improving production system performance on parallel archtectures by creating constrained copies of rules.
Alexander J. Pasik and Salvatore J. Stolfo.

[CUCS-314-87] Circuit minimization techniques applied to knowledge engineering.
Alexander J. Pasik.

[CUCS-315-87] The expected-outcome model of two-player games (doctoral dissertation).
Bruce Abramson.

[CUCS-32-82] Average case optimal algorithms in hilbert spaces.
G. W. Wasilkowski and H. Wozniakowski.

[CUCS-33-82] @i(ace:) an expert system supporting analysis and management decision making.
Salvatore J. Stolfo and Gregg T. Vesonder.

[CUCS-34-82] Programming in the dado machine: An introduction to ppl/m.
Salvatore J. Stolfo, Daniel Miranker, and David Elliot Shaw.

[CUCS-35-82] Measuring uncertainty without a norm.
Arthur G. Werschulz.

[CUCS-36-82] Statistical security of a statistical data base.
J. F. Traub, H. Wozniakowski, and Y. Yemini.

[CUCS-37-82] Representing complex physical objects in memory.
Kenneth Wasserman and Michael Lebowitz.

[CUCS-38-82] Does increased regularity lower complexity?
Arthur G. Werschulz.

[CUCS-39-83] Recursion in text and its use in language generation.
Kathleen R. McKeown.

[CUCS-4-79] A relational database machine architecture.
David Elliot Shaw.

[CUCS-40-83] Focus constraints on language generation.
Kathleen R. McKeown.

[CUCS-41-83] For which error criteria can we solve nonlinear equations?
K. Sikorski and H. Wozniakowski.

[CUCS-42-83] Optimal solution of nonlinear equations satisfying a lipschtiz condition.
K. Sikorski.

[CUCS-43-83] Architecture and applications of dado: A large-scale parallel computer for artificial intelligence.
Salvatore J. Stolfo, Daniel P. Miranker, and David Elliot Shaw.

[CUCS-44-83] Performance evaluation of a packetized voice system - simulation study.
Tatsuya Suda, Hideo Miyahara, and Toshiharu Hasegawa.

[CUCS-45-83] Performance evaluation of an integrated access scheme in a satellite communication channel.
Tatsuya Suda, Hideo Miyahara, and Toshiharu Hasegawa.

[CUCS-46-83] Prolog on the dado machine: A parallel system for high-speed logic programming.
Stephen Taylor, Christopher Maio, and David E. Shaw Salvatore J. Stolfo.

[CUCS-47-83] Environmental relations in image understanding: The force of gravity.
John R. Kender.

[CUCS-48-83] Efficient algorithms for finding maximal matching in graphs.
Zvi Galil.

[CUCS-49-83] Surface constraints from linear extents.
John R. Kender.

[CUCS-5-79] A hierarchial associative architecture for the parallel evaluation of relational algebraic database primitives.
David Elliot Shaw.

[CUCS-50-83] Exercising the non-von primary processing subsystem.
Bruce K. Hillyer and David Elliot Shaw.

[CUCS-51-83] Coping with complexity.
J. F. Traub.

[CUCS-52-83] Implementing descriptions using non-von neumann parallelism.
Michael Lebowitz.

[CUCS-53-83] Classifying numeric information for generalization.
Michael Lebowitz.

[CUCS-54-83] Researcher: An overview.
Michael Lebowitz.

[CUCS-55-83] Creating a story-telling universe.
Michael Lebowitz.

[CUCS-56-83] Knowledge engineering: Theory and practice.
Salvatore J. Stolfo.

[CUCS-57-83] Optimal integration for functions of bounded variation.
J. F. Traub and D. Lee.

[CUCS-58-83] Some nonlinear operators are as easy to approximate as the identity operator.
G. W. Wasilkowski.

[CUCS-59-93] Cupid: A protocol development environment.
Yechiam Yemini and Nihal Nounou.

[CUCS-6-79] Learning control of production systems.
Salvatore J. Stolfo.

[CUCS-60-83] Two nonlinear lower bounds for on-line computations.
Pavol Duris, Zvi Galil, Wolfgang Paul, and Ruediger Reischuk.

[CUCS-61-83] The non-von supercomputer project: Current ideology and three-year plan.
David Elliot Shaw.

[CUCS-62-83] Physical object representation and generalization: A survey of natural language processing programs.
Kenneth Wasserman.

[CUCS-63-83] The dado parallel computer.
Salvatore J. Stolfo.

[CUCS-64-83] Information and computation.
J. F. Traub and H. Wozniakowski.

[CUCS-65-83] Average case @g(e)-complexity in computer science: A bayesian view.
J. B. Kadane and G. W. Wasilkowski.

[CUCS-66-83] What is the complexity of related elliptic, parabolic and hyperbolic problems.
Arthur G. Werschulz.

[CUCS-67-83] Counterexamples in optimal quadrature.
Arthur G. Werschulz.

[CUCS-68-83] Computing d-optimum weighing designs: Where statistics, combinatorics, and computation meet.
Zvi Galil.

[CUCS-69-83] Table-driven rules in expert systems.
Alexander Pasik and Marshall Schor.

[CUCS-7-80] Some problems in topological graph theory.
Jonathan L. Gross.

[CUCS-70-83] Local average error.
G. W. Wasilkowski.

[CUCS-71-83] Covers of attribute grammars and sub-protocol attribute evaluators.
Rodney Farrow.

[CUCS-72-83] Protocol architecture of a tree network with collision avoidance switches.
Tatsuya Suda.

[CUCS-73-83] Lower bounds on communication complexity.
Pavol Duris, Zvi Galil, and Georg Schnitger.

[CUCS-74-83] Optimal parallel algorithms for string matching.
Zvi Galil.

[CUCS-75-83] Controlling window protocols for time-constrained communication in a multiple access environment.
James F. Kurose, Mischa Schwartz, and Yechiam Yemini.

[CUCS-76-83] Natural language systems: How are they meeting human needs?
Kathleen R. McKeown.

[CUCS-77-83] On the design of parallel production system machines: What's in a lip?
Salvatore J. Stolfo.

[CUCS-78-83] Non-von's performance on certain database benchmarks.
Bruce K. Hillyer and David Elliot Shaw.

[CUCS-79-83] Evolution of the non-von supercomputer.
David Elliot Shaw.

[CUCS-8-80] Computational complexity.
J. F. Traub.

[CUCS-80-83] Can adaption help on the average?
G. W. Wasilkowski and H. Wozniakowski.

[CUCS-81-83] Is gauss quadrature optimal for analytic functions?
M. A. Kowalski, A. G. Werschulz, and H. Wozniakowski.

[CUCS-82-83] The accurate solution of certain continuous problems using only single precision.
M. Jankowski and H. Wozniakowski.

[CUCS-83-83] Performance analysis of two competing dado pe designs.
Daniel P. Miranker.

[CUCS-84-83] Complexity of indefinite elliptic problems.
Arthur G. Werschulz.

[CUCS-85-83] User-oriented explanation for expert systems.
Kathleen McKeown.

[CUCS-86-83] Using focus to generate complex and simple sentences.
Marcia A. Derr and Kathleen R. McKeown.

[CUCS-87-83] Research directions in distributed computing and communications.
Yechiam Yemini.

[CUCS-88-83] A real-time transport protocol.
Yechiam Yemini.

[CUCS-89-83] Distributed multiple access protocols and real-time communication.
James F. Kurose, Yechiam Yemini, and Mischa Schwartz.

[CUCS-9-80] Knowledge-based retrieval on a rational database machine.
David Elliot Shaw.

[CUCS-90-83] A family of window protocols for time-constrained applications in csma networks.
James F. Kurose and Mischa Schwartz.

[CUCS-91-84] Natural language for expert systems: Comparisons with database systems.
Kathleen R. McKeown.

[CUCS-92-84] Asymptotic optimality of the bisection method.
K. Sikorski and G. M. Trojan.

[CUCS-93-84] Minimal number of function evaluations for computing topological degree in two dimensions.
K. Sikorski.

[CUCS-95-84] Relational query processing on the non-von supercomputer.
David Elliot Shaw.

[CUCS-96-84] Logic programming using parallel associative operations.
S. Taylor, A. Lowry, G. Q. Maguire Jr., and S. J. Stolfo.

[CUCS-97-84] Unification in a parallel environment.
Stephen Taylor, Daphne Tzoar, and Salvatore J. Stolfo.

[CUCS-98-84] Putting pieces together: Understanding patent abstracts.
Michael Lebowitz.

[CUCS-99-84] Creating characters in a story-telling universe.
Michael Lebowitz.

[CUCST-251-86] Canonical approximation in the performance analysis of distributed systems – phd dissertation.
Eugene Pinsky.
